Application/Control Number: 10/614,851

Art Unit: 2815

Election/Restrictions

- 1. Claims 31-41 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected group II, there being no allowable generic or linking claim. Election was made without traverse.
- 2. It is suggested that Applicants cancel claims 31-41 in response to this Office action.

Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Application/Control Number: 10/614,851

Art Unit: 2815

Claims 1, 5, 10-12, 14, 16, 20, 24-27, and 29 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kelly et al. (US 5,798,567) in view of Kelkar et al. (US 6,084,308).

Kelly shows in Fig. 4 a first package part 51 having top and bottom surfaces, the top and bottom surfaces having pads for I/O terminals; a cavity in the first package part 51; a chip 41 mounted in the cavity, the chip having an active surface including an IC and contact pads; a second package part 43 having a top and bottom surfaces, the bottom surface having a first plurality of I/O terminals aligned with the chip contact pads, and a second plurality of I/O terminals aligned with the top surface I/O terminals of the first package part 51; the second package part 43 further having connector lines 55 between the first and second plurality of terminals; and interconnection elements 58 and 53 between the chip contact pads and the plurality of terminals of the second package part 43, and between the second plurality of terminals of the second package part and the top surface terminals of the first package part 51. However, Kelly fails to teach having pads for I/O terminals at the bottom surface of the first package part 51. Kelkar teaches having pads for I/O terminals 304 at a bottom surface of a package. Hence, it would have been obvious to one having ordinary skill in the art at the time the invention was made for Kelly to include pads for I/O terminals at the bottom surface of the first package part for external connections, as is notoriously known.

Concerning claims 5, 1-12, 14, 16, 20, 24-27 and 29, please see the above discussion and see Fig. 4.

Application/Control Number: 10/614,851

Art Unit: 2815

Allowable Subject Matter

4. Claims 2-4, 6-9, 13, 15, 17-19, 21-23, 28, and 30 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The reasons for allowance: the applied references fail to teach the limitations as set forth in claims 2-4, 6-9, 13, 15, 17-19, 21-23, 28, and 30.
